

Chicago Wilderness CORPORATE COUNCIL

Member Directory *December 2011*

**Attached is the contact and descriptive information for
Chicago Wilderness Corporate Council members in alphabetical order.
An index by service is appended at pages 37-41.**

Please remember these supporting members when planning your projects.

Vision Statement: *The Chicago Wilderness Corporate Council is an integral member of the Chicago Wilderness consortium, which is devoted to maintaining and enhancing the biodiversity of the Chicago region ecosystems. The Corporate Council aims to improve the quality of life in the region by knitting together economic goals, ecological health standards, and social values to achieve a sustainable relationship between people and nature.*

Mission Statement: *The Corporate Council brings the resources, skills, capabilities, and influence of its members to foster widespread awareness of the region's biodiversity and to develop broad-based support for its protection, restoration, and stewardship. To provide a more sustainable urban region, members of the Council will strive to promote and use best practices in the design and management of their facilities and property.*

ArcelorMittal is the world's leading steel and mining company with a presence in more than 60 countries. In the U.S., ArcelorMittal employs more than 18,000 men and women across 20 integrated, steel producing, finishing and mining facilities, with our USA and Americas' headquarters in Chicago.

ArcelorMittal is the leader in all major global steel markets, including automotive, construction, household appliances and packaging, with leading R&D and technology, as well as sizeable captive supplies of raw materials and far-reaching distribution networks. Through our core values of Sustainability, Quality and Leadership, ArcelorMittal commits to operating in a responsible way with respect to the health, safety and well-being of its employees, contractors and the communities in which we operate.

We take a leading role in the industry's efforts to develop breakthrough steelmaking technologies and we are actively researching steel-based technologies and solutions that contribute to combat climate change. In 2010, ArcelorMittal had global revenues of \$78.0 billion and crude steel production of 90.6 million tons, representing approximately 6 percent of world steel output.

For more information on environmental-related activities at our USA operations, please visit: www.arcelormittal.com/environment/us or learn more about our company at www.arcelormittal.com.

From its beginnings as a wholesale cut flower operation started by George J. Ball in 1905, Ball Horticultural Company has grown into a leader in all facets of floriculture, with distribution capabilities in all of the major world markets.

Since its founding, Ball has introduced many innovative, award-winning varieties to the world of horticulture, including the Wave® Petunia Family, Dazzler® and Super Elfin® Impatiens, and Fiesta™ Double Impatiens. The company also offers the Simply Beautiful® and Circle of Life™ programs exclusively for independent garden centers.

Focused exclusively on the ornamental business that first made its reputation, Ball's global family of breeders, seed and vegetative producers, distribution companies, and research and development teams has a strong presence in over 20 countries on six continents.

BP is one of the world's largest energy companies. In the US, BP has approximately \$52 billion in assets and employs some 23,000 staff. The company's main businesses are exploration and production of oil and gas; refining, manufacturing and marketing of oil products and petrochemicals; transportation and marketing of natural gas. With a growing business in wind power, advanced biofuels and one of the largest solar farms on the east coast, BP Alternative Energy will have invested around \$7 billion in energy development, including \$4 billion in the US by the end of 2011. Our commitment is helping to create a secure and sustainable energy future for us all.

At a time when the world is facing daunting environmental issues, such as climate change and depleted natural resources, it's critical we all adopt more sustainable practices. Burns & McDonnell has made a conscious decision to lead by example. As a company, our engineers and scientists have implemented the following sustainability initiatives at our world headquarters in Kansas City, Missouri.

- Stormwater Management
- Pervious Pavement
- Green Roof
- Photovoltaic Modules
- Hybrid Lighting
- Water Conservation
- Energy Management
- Recycling

With the sustainable initiatives implemented, energy consumption has been reduced by 16% annually, with 50% water consumption reduction (1.5 million gallons per year are conserved); and the city's infrastructure relieved of 3.4 million gallons of stormwater per year.

Founded in 1898, Burns & McDonnell is a full-service engineering, environmental and consulting solutions firm. Burns & McDonnell plans, designs, permits, constructs and manages facilities all over the world with one mission in mind – *Make our Clients Successful.*

CANTIGNY

Cantigny Park

Cantigny Park was the estate of Colonel Robert R. McCormick, former editor and publisher of the Chicago Tribune, and is part of the McCormick Foundation, which has been serving the needs of our children, communities, and country for more than 50 years. Colonel McCormick left his 500-acre estate as a gift to the people of Illinois for their education and recreation. The park offers two world-class museums, nearly 40 acres of formal gardens, a championship golf course and state-of-the-art golf learning center, two restaurants and a coffee shop, and so much more. Cantigny is a place to bring your children to learn and play, a place for the community to gather for celebrations and events throughout the year, and a place to honor our country's military men and women.

Cardno ENTRIX is a fast-growing environmental and natural resource management firm with approximately 40 offices throughout North America. Founded in 1984, Cardno ENTRIX provides turn-key solutions to many environmental challenges. With expertise in dozens of specialized environmental areas, we can meet or exceed the expectations of our clients. We credit our success to many factors. Among them is the ability of our team to help clients develop successful projects while meeting the demands associated with ever-changing environmental laws and regulations. Employing a well-regarded staff of the highest integrity is another critical component of our success.

Widely considered a premier firm for our strategic planning capabilities and innovative approaches to the management of environmental and natural resources liabilities, Cardno ENTRIX attracts high-caliber, multidisciplinary employees, including scientists, biologists, ecologists, wetland specialists, economists, restoration and civil engineers, planners, ecotoxicologists, chemists, risk assessors, and project managers who offer valuable skills to every client assignment. This results in consulting services of unparalleled quality in the industry.

Cardno JFNew is an experienced ecological services firm that has been providing sound client-focused solutions to challenging environmental issues since 1989 throughout the Midwest. Our team of more than 130 professionals provides the full range of ecological consulting and restoration services and operates one of the largest native plant nurseries in the nation with over 355 available species.

Headquartered in Northwest Indiana, with regional offices in Monee, Illinois; Madison and Eau Claire, Wisconsin; Grand Haven, Ann Arbor, and Lansing, Michigan; Cincinnati, Ohio; and Indianapolis, Indiana, our team can provide comprehensive ecological solutions throughout the Midwest. Typical work includes: watershed and stream enhancement, streambank restoration, watershed planning, environmental engineering and regulatory permitting, wetland investigation, mitigation design, endangered species consulting, natural systems for wastewater and stormwater treatment, archeology, cultural resource management, green infrastructure design and implementation, and native plant nursery supply.

Member,

The Care of Trees is an award-winning company that has been protecting and caring for trees in the Chicago Wilderness region for nearly 60 years. As well as providing total tree care for residential, commercial and municipal clients, our certified arborists work with builders and developers to preserve trees in real estate and conservation developments. We also provide woodland restoration and management services. Our comprehensive SoilCare program uses an all-natural, environmentally friendly approach that promotes healthy trees by enhancing soil biology. From pruning and pest management to tree inventories and tree-sensitive site planning, The Care of Trees' nine Chicago-area offices are ready to help you protect your trees.

The Care of Tree's Tree Preservation and Land Restoration Division, which merged with Davey in June of 2009, is now the Land Develop Solutions. The staff will focus on providing planning and design, through construction, and into postconstruction care and maintenance, to design, development, and construction clients.

Member, Chicago Wilderness Corporate Council Marketing Task Force

Christopher Burke Engineering, Ltd. (CBBEL) is unique among consulting engineering and surveying firms in that we are a full-service company that can comprehensively meet the needs of both private and public sector clients. Still guided by founder and President Christopher B. Burke, our “family business” corporate philosophy allows for a level of personal service that ensures peace of mind. Our staff of almost 250, nine offices covering two states, and exhaustive list of specializations—civil, municipal, transportation, water resource, mechanical, structural, construction, traffic, and environmental engineering and environmental resource services—provide professionalism and a depth of expertise that promote project success.

RESOURCES Our staff includes five PhDs, seventy licensed professional engineers, and a team of licensed structural engineers, licensed professional land surveyors, and a licensed landscape architect. Twenty-seven staff are Certified Floodplain Managers (CFM), seventeen are Certified Professionals in Erosion and Sediment Control (CPESC), and an additional staff member is registered in soil classification and soil science. CBBEL staff represents 10% of Illinois' CFMs and nearly 20% of the state's CPESCs.

Through leadership positions and active membership in a variety of professional associations CBBEL is able to deliver emerging cutting-edge technology and techniques. The outcome is a context-sensitive approach that rejects out-dated cookie-cutter remedies and instead provides the best solution for your needs.

Our resources are geographically distributed to create a network of effective and convenient service. Rosemont, Illinois, is home to our main office and Illinois locations include New Lenox, St. Charles, and Peoria. Our Indiana offices are located in Indianapolis, Crown Point, South Bend, Fort Wayne, and Columbus. We are prequalified for projects under the Department of Transportation of both states and prequalification details are attached for reference.

SERVICES Since its founding in 1986 the size of our company and the complexity of our projects have grown. As a full-service firm CBBEL also conducts water resource related studies, performs GIS services, environmental resource assessment, mitigation planning and permitting, and a myriad of traditional civil engineering functions. Christopher B. Burke Engineering (CBBEL) is well positioned for all types of environmental projects because of the diversity and experience of our staff. CBBEL has focused on water resources and wetland/natural area restoration since its inception. The Environmental Resources Department has 14 specialists in the fields of forest, wetland and prairie ecology, wildlife biology, botany, soil science, habitat restoration, threatened and endangered species, GIS applications, geography and geology. The Environmental Resources Department has worked on more than 4000 projects over the last 23 years, with restoration projects as large as 340 acres.

Member, Chicago Wilderness Development Committee

Member, Chicago Wilderness Spatial Data Management Advisory Group

Member, various grant writing teams

Founded in 1994, Futurity, Inc. specializes in the development, analysis and management of spatial data for the purposes of land planning and management. Organizations look to Futurity to provide a better understanding of environmental conditions; create innovative systems for integrating and sharing information; and design new ways of working.

Futurity's complimentary technical capacities, ranging from remote sensing to web-based decision-support systems, result in complete cutting-edge solutions. Our detailed land-cover maps—derived from multispectral aerial and satellite imagery—supply critical insight. Our web-accessible databases expand the collection and sharing of information. And the tools and systems we program leverage and transform work. Combined, it is our aptitude for generating complete, sophisticated, and forward-thinking solutions to diverse needs that sets Futurity apart.

Vice Chair, Chicago Wilderness Corporate Council

Member, Green Infrastructure Vision Task Force

Geosyntec was established in 1983 as a multidisciplinary environmental engineering firm with a mission of providing high quality environmental consulting, engineering design, feasibility study, and construction oversight services to government and industrial clients. With a staff of over 750 employees, the company maintains over 40 offices in the United States and Canada. Our Water Resources Group includes a core group of senior staff with nationally recognized expertise in stormwater management, water resources engineering, green infrastructure planning, groundwater management, wetlands and water resources ecology and restoration, lake management, watershed management planning, and innovative Geographical Information Systems (GIS) mapping applications.

Geosyntec is known for its innovative work in green infrastructure system mapping, watershed planning, stormwater and surface water management, hydromodification management, BMP design, large-scale TMDL program implementation, water quality permitting and antidegradation review, wasteload allocation modeling, data collection and database synthesis, and erosion and sediment control program management. Our personnel have helped shape the state of these practices nationally over the past two decades via joint research and project work with civil engineering faculty at outstanding academic institutions, as well as continuous involvement in original research, development, and application of techniques and technologies. As a result, Geosyntec is recognized for frequently facilitating the transfer of technologies from academia to commercial and public use.

From our offices in downtown Chicago and Oak Brook, we have been serving clients in the Chicagoland area for over 15 years, as well as providing services to clients nationwide.

Member, Chicago Wilderness Corporate Council Congress Task Force

Gewalt Hamilton Associates, Inc. (GHA) is a Professional Engineering firm licensed and registered in the State of Illinois. For more than three decades, GHA has been providing civil engineering services to municipal governments, townships, county and state agencies, school districts, park districts, hospitals, community colleges, park districts, senior care facilities, commercial and residential developers, and private organizations. Together, we are committed to providing creative, responsive, and cost-effective solutions for projects that positively impact our communities and our environment.

GHA's professional service capabilities include:

- Municipal Engineering
- Civil Engineering Design
- Transportation Planning
- Traffic Engineering
- Signal Coordination & Timing
- Water Resources
- Environmental Consulting
- Surveying
- High Definition Scanning
- Construction Phase Services
- Geographic Information Systems.

The firm's Principals have long-standing career involvement in the public sector, a tradition that continues at GHA. We currently serve as the full-time Village Engineer for nine municipalities and the full-time Traffic Engineering Consultant to 13 communities. Our entire firm is committed to providing superior client service with professionalism, integrity, dedication and vision— every project, every client, every time.

In an industry rapidly evolving with continuous technological advances and a renewed commitment to sustainability, GHA strives to remain at the forefront. We excel at complex assignments that require both engineering expertise and problem solving creativity. We are driven to produce innovative designs that balance project function, economics and environmental sustainability while meeting regulatory requirements and client needs.

Our environmental staff works closely with civil design and water resources teams to incorporate sustainable design elements that minimize the impact of development on the environment. GHA helps clients understand and abide by the often complicated range of Federal, State and local regulations relating to wetlands and environmentally sensitive areas. We consistently produce designs that balance project function and economics with natural resource preservation, increasing project appeal to both the public and regulatory agencies.

GRAEF

One Honey Creek Corporate Center, 125 South 84th Street, Suite 401, Milwaukee, Wisconsin 53214-1470

Wetland Ecologist

E-mail: tina.myers@graef-usa.com

Phone: 414-266-9116

Cell: 414-412-4605

Established in 1961, GRAEF is a leading U.S. consulting firm, as ranked by Engineering News Record Magazine, with over 300 engineers and scientists. Providing our clients with the highest level of technical expertise has been a priority and a hallmark of our business. Our technical personnel are able to address all phases of analysis, design, restoration, monitoring and adaptive management. We specialize in natural resource management for many types of clients including land conservancies, nature preserves, municipalities and utilities; GIS services; hydrology and hydrogeology; surface water planning; wetland services; landscape architecture; rare and endangered species surveys and permitting; sustainable design; land information management; and environmental engineering services including documentation.

Innovate - We have a team of specialists who offer a broad spectrum of land conservation and natural resource management skills. Our services range from natural resource inventory through habitat evaluation, groundwater modeling and design services for mitigation and restoration of existing habitats. Our staff includes biologists, ecologists, wetland scientists, soil scientists, GIS professionals, hydrogeologists and hydrologists. The services we provide can be tailored to address a specific project challenge, or we can assume total project responsibility from planning and data gathering through permitting and implementation.

Integrate - The integration of natural systems and the built environment is evolving into an ever-more complex mosaic of integrated land use management challenges. As partners with our clients, we assume a professional responsibility in achieving their scheduling, fiscal and functional goals, while maintaining an ultimate responsibility for the protection of our shared environment. This is best achieved through active communication, sensitivity to our clients' requirements and limitations and the multidisciplinary appreciation of scientific, cultural and engineering disciplines.

Collaborate - A well-qualified Natural Resources Management Team must bring about sustained protection to environmentally sensitive areas while enhancing and restoring adjacent areas. This team must have a broad background in ecology, erosion control measures, stormwater management, soil science, and state and federal permit restrictions. Our experience and understanding of natural resources in the Midwest makes the GRAEF team well-qualified to prepare plans and strategies to restore, protect and enhance the natural resources on project sites.

Midwest Generation is an independent power producer operating six major power plants in Illinois. Its plants are located in Chicago, Waukegan, Joliet, Romeoville, and Pekin. Headquartered in Chicago, the company is a subsidiary of Edison Mission Group (EMG) of Irvine, California. Midwest Generation has about 1,200 Illinois employees, and can generate enough electricity to meet the needs of about 8 million homes. In December 2006, the company entered into an agreement with the State of Illinois to undertake a comprehensive environmental improvement project that will reduce air emissions at all of its sites over the next 10 years, including the installation of mercury emission controls beginning in 2008. In addition, EMG has begun preconstruction work on a large wind farm in Lee and Bureau counties in north central Illinois.

Midwest Groundcovers LLC is a wholesale grower, propagating over twenty million of the finest plants in the Midwest for landscape contractors, garden centers, public projects and the landscape trade every year. Midwest carries a broad and complete line of native plants in sizes from plug to #1 for herbaceous material and up to #5 for our growing line of woody natives. Natural Garden Natives™ is a unique collection of over 250 species of local geno-type native plants with seed collected within 90 miles of St. Charles, Illinois. Midwest Groundcovers leads the Green Industry in partnering with landscape architects, designers, green roof and plant professionals to create inspiring planting combination solutions. As experts in plants with Midwestern durability and sustainability for more than 40 years, the Midwest mission is to provide quality plants and services to customers in the landscaping and green environment while building a quality company where employees and owners can achieve professional and personal goals.

Midwest Trading Horticultural Supplies, Inc. is a hard-goods supplier for horticultural products headquartered in Virgil Illinois, approximately fifty-five miles west of Chicago.

For over twenty five years, Midwest Trading has been a leader in the industry in Chicagoland and the midwestern states providing hardwood and pine mulches, mushroom compost, custom blended soil mixes, nursery containers and VersaQuonset greenhouses. Most recently, Midwest Trading has introduced new sustainable products into the Green Industry such as CU-Structural Soil, rooftop garden media, bioswale blends and other engineered soils. They produce standard mixes for specific applications as well as custom blends engineered to project specifications which can be delivered either bulk or bagged.

Midwest Trading's mission is to exceed the expectations of customers in the horticultural and related fields with quality non-plant products and services.

With a strong track record in strategic communications counseling, PCI is widely recognized for providing results-oriented, measurable communications, public affairs and marketing services.

We have a concentration of business in conservation, culture/entertainment/sports, education, health care and "everything Chicago," but enjoy an eclectic business that includes banks, technology companies, engineering firms and law firms.

We develop integrated communications strategies for clients with diverse objectives. From our largest multi-national corporate clients to our smallest start-ups and non-profits, all clients receive senior level strategic counsel and jump-through-hoops service. An officer in the company leads every account team, hands-on and with a focus on meeting the client's definition of "success."

Roux Associates is a professional services firm providing a broad range of consulting and project management services to solve complex environmental, health, and safety problems associated with air, water, land, and interior pollution; hazardous materials; and toxic waste treatment and disposal. Roux Associates has built an organization with a high level of sophisticated professional skills and a broad range of scientific, technical and managerial resources. These skills and resources are required to develop and implement effective, efficient, long-term solutions to complex existing problems, as well as avoid future problems. Roux Associates utilizes all of the appropriate scientific, engineering, and management disciplines in a technically integrated approach.

Founded over 28 years ago, Roux Associates is recognized for being highly effective and client-focused. From the beginning, our work involved large complex environmental remediation projects, including Superfund sites, chemical and manufacturing plants, and petroleum refineries and distribution terminals. Today, we are an employee-owned company with over 250 environmental professionals in a variety of science and engineering disciplines, providing a mixture of traditional environmental site remediation and compliance services, as well as cutting-edge technical solutions.

Our award-winning Engineered Natural Systems (ENS) Group focuses on the application of ENS Technologies to process wastewater, surface water contamination, and stormwater control in addition to many industrial applications. Roux's team members have successfully designed and installed ENS systems for petrochemical, utility, and related industries, in a range of cold and warm climate settings. Engineered Natural Systems (ENS®) offering sustainable, low-cost technologies that optimize natural processes to treat wastewater, stormwater runoff, and contaminated groundwater prior to discharge or re-use. ENS® Technologies include constructed treatment wetlands, natural media filtration, phytotechnologies and rain gardens.

Serosun Farms

Phone: 760-633-1620

Fax: 760-633-1738

www.serosunfarms.com

Contact: John DeWald

Owner/Manager

E-mail: jdewald@serosunfarms.com

Cell: 619-709-2631

Serosun Farms Estate is a mixed use/multi-use land management project that includes active agricultural land, equestrian operations, residential sites, limited commercial sites, and open space. The elements are combined in an effective mix such that uses are compatible and complimentary to each other. It allows the site to be developed in a low density manner yet retain the rural features of the area, preserve portions of the agricultural use, restore elements of the natural component of the land and create an interesting and cohesive community. It allows the site to reflect the past, present and future of northern Kane County and can provide a path to conserving the rural nature of the area. It also has the potential to create a buffer between local municipalities in the advent of increased suburban development. The community has a strong sustainable element to it that includes sustainable/high performance homes, a transition to more sustainable agricultural practices, a strong habitat restoration and biodiversity management program, and many other integrated elements. John DeWald and Associates is the developer and manager for Serosun Farms and specializes in developing sustainable, lifestyle communities.

SET Environmental, Inc.

Liaison Officer, Chicago Wilderness Corporate Council
Member, Leave No Child Inside Leadership Task Force

Combining a tradition of integrity, innovation, and excellence, SET Environmental, Inc. provides environmental management services to a nationwide client base from seven locations throughout the United States. Founded in Wheeling, Illinois in 1978, the firm currently employs more than 200 people, including over 100 environmental experts.

SET's niche for excelling in technically demanding projects has resulted in a service line offering that includes emergency spill response, environmental remediation, gas cylinder disposal, hazardous waste transportation, industrial cleaning, hazardous waste management and high hazard remediation.

Even as we thrive on meeting the challenges and needs of a technically demanding national clientele, SET continues to reflect the personal warmth, ethics, and professional dedication of its founders. We share considerable respect for each other's chemical, geotechnical, mechanical, engineering and environmental expertise and enjoy the experience of working together. SET is proud of its team approach, blending engineering and technical skills to develop and implement the most appropriate and efficient environmental management technologies for our clients.

Tallgrass Restoration is a full-service ecological restoration company providing ecological solutions within both public and private settings. Our services include controlled burning, invasive species control, native habitat installation, project design and management, and shoreline restoration/erosion control using bio-engineering materials and native plants. We provide complete landscape services to enhance the beauty and improve your land and water quality; increasing biodiversity by capitalizing and maintaining the unique characteristics of wetland, woodland and prairie ecosystems. We restore the health, integrity and beauty of our clients' land and water resources.

WRD Environmental is an ecological consulting firm that creates and fosters environmentally responsible urban landscapes. It designs, installs, manages and consults on landscape projects and programs that conserve natural resources, promote sustainability, cultivate biodiversity and restore nature's balance. From reducing urban heat islands, creating wildlife sanctuaries, and reviving degraded land and shorelines, to complementing green-building initiatives through ecologically-driven design, WRD employs the full range of best practices to elevate environmental planning and management. It strives to provide healthy and sustainable environments that are not only attractive but also responsible to current and future generations.
